**Project Title: Enhancing Engineers' Knowledge on Rock and Geological Conservation**

強化工程人員的岩石地質保育認識

**Project Abstract:**

Geology and rocks are the fundamental components of our natural environment and are also important elements to be considered in engineering projects. With increasing public concerns on protecting our environment and geological conservation, it is of paramount importance that engineers and other professionals shall exercise careful considerations in their works on balancing the needs of development and at the same time addressing general public's needs.

The project is funded for organizing a variety of activities. One of the activities is the conference Asia-Pacific Seminar on Geological Conservation and Sustainable Development 2008, Hong Kong (Co-organizer).
